CORROSTOP™ CORROSION INHIBITOR

CORROSTOP™ Corrosion Inhibitor has been chemically engineered to protect metal objects and equipment against the corrosive effects of fresh water, salt water and salt. It is a food grade, environmentally friendly product that is safe for use with oxygen service equipment!

Applications: Scuba equipment (e.g. cylinder protection, inside and outside), valves, regulators, fishing, boating and vehicular equipment constructed of metal and subject to the corrosive effects of salt. CORROSTOP™ is particularly useful when rinse water is either unavailable or must be conserved.

With similar and dissimilar metals, CORROSTOP™ inhibits anodic/cathodic deterioration and oxidation by:

- Stopping galvanic reaction
- Imparting a protective coating

CORROSTOP™ will, to some degree, repair past damage and prevent further corrosion when used as directed. CORROSTOP™ is safe for use with rubber and plastic products.

CORROSTOP™ concentrate is available in a 32-ounce bottle and a 2-ounce bottle. Two ounces of concentrate make one gallon.

Item# Description

- | | |
|------|------------------|
| A275 | 32 oz CORROSTOP™ |
| A278 | 2 oz CORROSTOP™ |

Both steel samples immersed in sea water

A. Treated with CORROSTOP™

B. Not treated
